(a)
total response
$L \le 48$ prediction
evaluation data $L = 64$
scaled response $\Delta N/V$
$h = V(x - x_{\mathrm{coex}})$
(b)
phase reweighting
$L \le 48$ prediction
evaluation data $L = 64$
scaled response $\Delta N/V$
$h = V(x - x_{\mathrm{coex}})$
(c)
total response: covariance modes
$Q = 240.1,\ p = 0.0005$
standardized mode residual
retained mode (largest eigenvalue first)
(d)
phase reweighting: covariance modes
$Q = 5.6,\ p = 0.23$
standardized mode residual
retained mode (largest eigenvalue first)
